The items below are copied from "The Catalogue of K-Vowel-N Words of the World," which currently (February, 2006) is online at the *Etymology to the Maximum* website, <http://www.lionsgrip.com/etym.html> . The author created this catalogue over a three-year period, finishing in 1992. It is in spreadsheet format, and interested readers are encouraged to try to find one of the versions that opens on your computer. With it, you can sort the columns any way you like: by the words themselves, by language, by Meanings, etc.

A ***Meaning***, as used in this study, is a generally-used human concept that is evidenced by KVN words found among numerous language groups throughout the world. Meanings are seen to group themselves around even more general concepts, as arranged in this presentation. These more-general concepts are designated as ***Clusters*** and ***Sub-Clusters***. (However, the Congregation Cluster is small, and no Sub-Clusters were found.) These are not fixed groupings, but, like any scientific key, can be equally successful under many different groupings and arrangements.

The Power of Generation is by far the largest Cluster in the K-vowel-N array of meanings. It shows that man was fascinated with the power of generation of life, of fire, of everything that comes into existence.

This is a preliminary edition of the information. More commentary and formatting will be applied to this in the near future.
